

Displaying Book Cover Images in catalogue records

You can display book cover images in your catalogue records: these are dynamically displayed as you view the record. This works by matching the ISBN in your record with the record on Google- if there is no image available, nothing will be displayed unless you have uploaded an [image](#) to the 'Missing cover image' setting in system configuration maintenance. Clicking on the record takes you to the record on Google.

To enable the book cover image function, it needs to be set up in various areas of the application:

- [System level](#) - whether Google images are to be used
 - [Record Type level](#) - adding the Book Cover field
-

Experiencing problems with displaying book cover images? See the [Troubleshooting Guide](#).
