

Client Workstation settings

If you have a Library Terminal in the Library that users can use, this setting allows you to define that PC as a Shared PC. This is solely for the purpose of managing how [Catalogue View statistics](#) are calculated. So for shared PCs, the count will calculate every time a record is viewed, to accommodate multiple users.

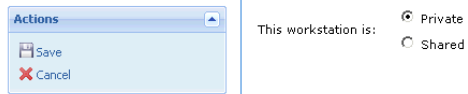

Note: To define a PC as Shared, you must make the change on the PC itself.

To access **Client Workstation Settings**, select **System Management > Client Workstation Settings**.

The following page appears:

Client Workstation Settings

Powered by SoutronGLOBAL

The screenshot shows a web interface for 'Client Workstation Settings'. On the left, there is an 'Actions' menu with 'Save' and 'Cancel' options. The main content area is titled 'This workstation is:' and contains two radio button options: 'Private' (which is selected) and 'Shared'.

The default value is Private and should not be changed, unless you are defining the PC you are working on as a Shared Public Access Terminal.

To change the setting to Shared:

1. Select the Shared radio button.
2. Click **Save** in the Actions menu.
